

Mini / Mini wide / Maxi Electro Blot System

Electro Blot Systems are primarily designed for wet electroblotting of proteins, and offer a combination of increased capacity with economy saving features. Electro Blot Systems have increased capacity over standard systems. Up to five gel blot cassettes utilized at any one time for Electro Blot Mini and Maxi, and Up to three gel cassettes utilized for Electro Blot Mini Wide. This is especially useful in high throughput laboratories.

A uniform electric field is provided by a high intensity coiled electrode and ensures uniform transfer across the blot surface. The cassette's open architecture ensures the maximum blot area allows direct transfer of current. Its rigid construction ensures contact between the gel and membrane is retained throughout the blot and an even pressure is maintained. These units are compatible with magnetic stirrers to aid heat dispersal and prevent pH drifts in the buffer due to incomplete buffer mixing. Each unit includes a cooling pack to further enhance transfer efficiency by removing excess heat. This also saves on buffer for added economy.

Feature

- >Ideal for wet electroblotting of proteins - Western Blotting
- >Hinged cassettes for added convenience
- >Accommodates gel thicknesses from 0.25 up to 3mm
